

CMPT 276 Mini project due June 16th Alan Pedersen.

Doing a missing persons website for BC.

Inspiration :

[missing person site Ontario](#)

[America Missing person site](#)

[Missing with vehicle](#)

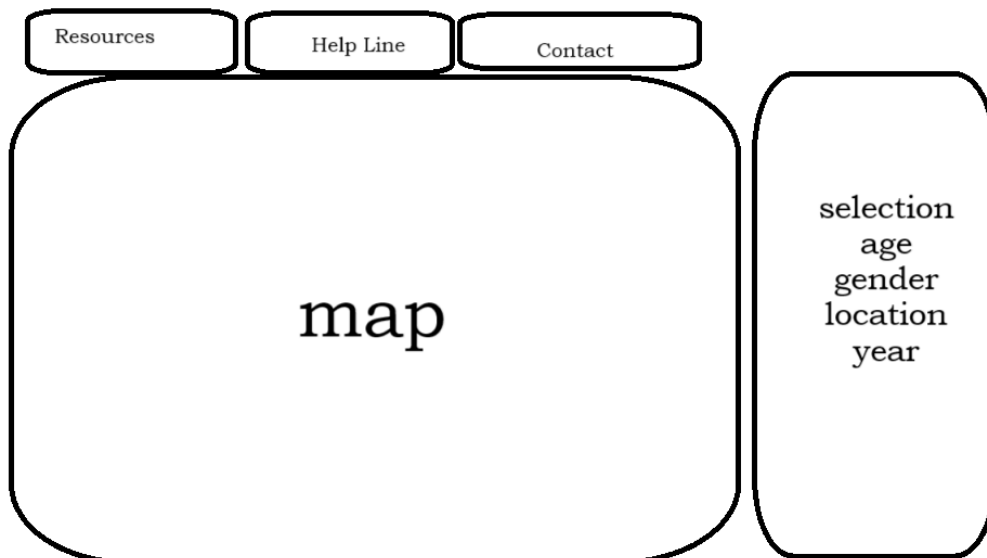

This must be in it:

Custom Favicon, 3 images, 6 hyperlinks, 3 tabs, bio / overview, 10 usability heuristics

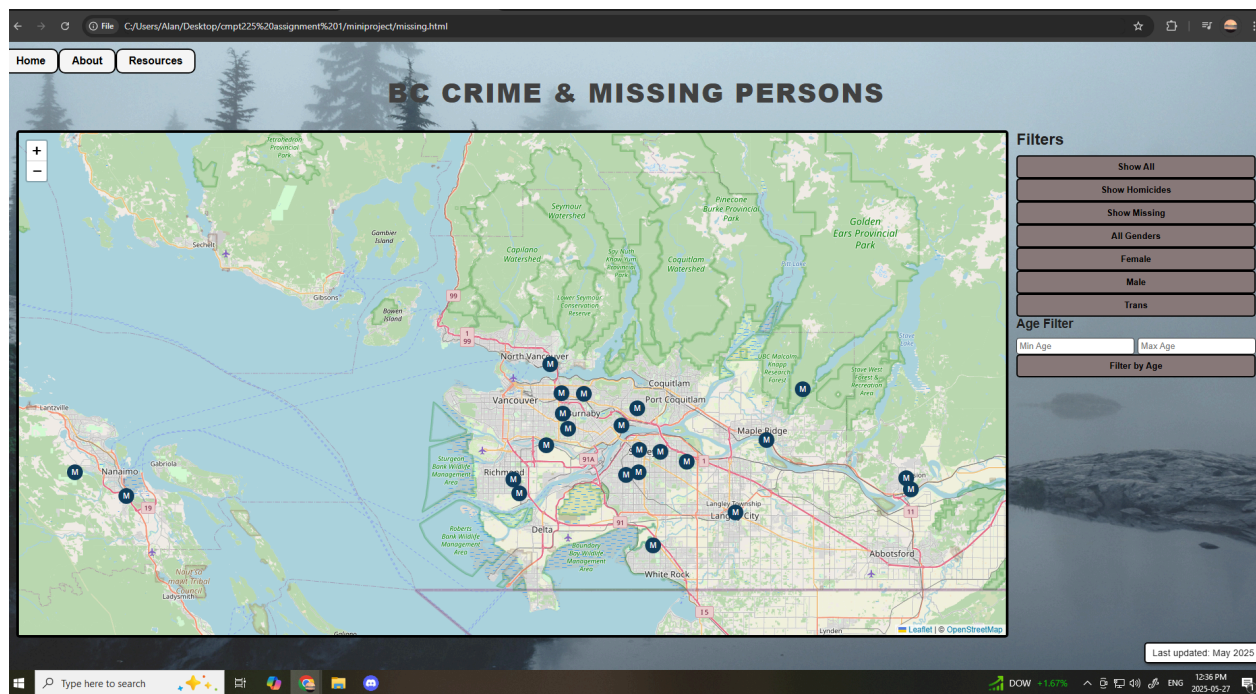

WBS:

1. Draw out the basic idea of what we want. Figure out what the tabs will be in the website.
2. In resources find 6 hyperlinks that deal with Missing people. Write out a bio in notepad.
3. Begin to code a basic website layout and structure. Look into leaflets for map creation.
4. Find images for background. Upload images in an image folder in the project.
5. Create practice markers for the maps. Filter out missing people using age and gender.
6. Find missing people.
7. Create a separate file to upload all missing people one by one. Look up latitude and longitude.
8. Learn Tailwind to make the css look nicer and implement nightmode.
9. Give it to friends to test and find bugs.
10. Adjust bugs and update the site depending on friends recommendations.
11. Test it again with updates.
12. If happy, deploy.

Basic MS Paint look

As you can see, It will be basic where there is a map in the middle. The selection tab on the right to change what you're searching for, and 3 tabs at the top lead to different pages.

Above is my website after a week of working. 2025-05-27. The hardest part is entering all the humans into a JAVASCRIPT file. Just tedious and takes a ton of time.

I have given the website to my roommates to test. Their biggest complaint is it "Looks like an oldschool internet sit.e" I would love to make it look more modern, but dont know how.

Currently, I think I may take the last updated section and move it to the about section. The about section also needs to be cleaned up. Must find a way to clean up the filters and fix that dead space below the search by age?

2025-05-29 met with Vincent Hu to work on the missing persons site. Gave feedback on the banner and such. Looking at Tailwind CSS and front-end developer stuff.

2025-06-03, I was blocked by video games. Working on learning tailwind. Its cool buy just a lot to add when learning.

2025-06-10, Over the past few days I have updated things. Fixed the header problem by changing 2.5em to 1em. After feedback from friends. I have added a tipline after feedback. Think I am ready to deploy.

2025-06-11, So I have no added all the homicide people so we have homicide and missing persons. Honestly, this is really depressing. I have spent hours and hours looking at missing and dead people. To whoever ever reading this gosh, it was a nightmare.

2025-06-18, I have finished the site and submitted it. Tons of adjusting and updating small things. I am very happy with it and hope you all are also.
